

# BENEFITS OF END MATCHED PATTERN BOARDS

## WHAT IS END MATCHING?

End matching is the process of creating a tongue and groove profile on the ends of each board. On one end of the board a tongue will be machined and on the other end a groove will be machined. This creates a joint that perfectly locks boards together end to end.

## TOP 5 BENEFITS OF END MATCHING

### 1 Reduces material waste

- Blemishes, cracks, and defects have already been cut out
- Limited trimming necessary
- Reduce material waste up to 20%

### 2 Save on labor costs and time

- No need to waste time on cutting since boards come pre-cut
- Increased speed of install
- Less scraps creates an easier clean-up
- Reduce up to 20% on labor costs

### 3 Easier to Install

- End matched boards fit snugly and securely together
- No need to butt on a stud, just continue where you left off

### 4 Better Weather Barrier

- End matched boards provide a stronger and more waterproof joint
- Boards can be fastened through the tongue rather than the face

### 5 Consistent Look

- Boards lock into place the same way each time creating a uniform look
- “Blind nailing” takes away nail bleeds that can occur when nailing into the face
